3 - What features of this course and of the instructor's teaching contributed most to your learning?

Amanda Bienz

Response Rate	10/32 (31.25%)
<ul style="list-style-type: none">• The daily quiz was a good way to check understanding and gave a chance to ask questions that were not obvious during the lecture. After a few years of high pressure classes it felt so nice to have one that was more relaxed• Productively engaged students in class and after class Easy to communicate with Test logs and test files for homework Videos of lectures Late policy tbh Homework, notes, videos, study guides all tied into a common goal of needed to know information. Basically everything• The level of organization for this course was incredible. Every assignment and due date was made clear from the onset. The organization of the schedule made managing time for this course so much easier and allowed me to focus my time on studying/learning much easier.• Showing examples of how code works. Recording lectures to rewatch at a later time if needed. In class questions were very helpful, and generally accurate to the tests. The tests used code from the homeworks, which was great, and made doing the homework extra rewarding.The homework 0 where we were taught Git functionality was extremely helpful.• In-class questions• I loved the examples and kept asking questions to see if we understood and waiting for everyone to respond. The lectures were well put together. Basically a really great review of the actual textbook without going over each detail. The structure of the class was great. in my opinion, far better than all the other professors. I wish I had taken CS481 before my previous classes because I think this taught me more than the beginner and lower-level classes. The lower-level classes didn't teach me as well as Professor Amanda's. I honestly wish I had taken more classes with Amanda as the professor.• Dr. Bienz is very approachable and makes sure that students comprehend the material through intermediate checks, such as in-class questions.• The course structure was very clear. It was very evident that Professor Bienz understood and designed the course from a student's perspective.• Daily exercises, review, and readme files for homework• Very friendly and explained everything so that all could understand.

4 - What specific suggestions do you have to improve the course and the instructor's teaching?

Amanda Bienz

Response Rate 10/32 (31.25%)

- The course slides could use an update, it is not always easy to tell what they are saying outside of lecture.
- I guess the only thing would be more in-depth notes.
- There were always last minute updates and changes to the homework that weren't too big of a deal but did make me less inclined to start the assignments early. If the same assignments are to be reused in the next semester than this issue has already been resolved.
- I think Having a version of the slides that have a bit more information could be helpful. There were a few times that I had to rewatch the lecture to understand the slides.
- none
- Overall, great job! I loved your lectures, and I loved the structure of the course. I love the in-class questions and how all of those relate to the midterms. I do wish that there was more error-checking in the papers. I think there were a few times I was confused about how some of the questions were asked, and if no one questioned you about it, then you got the question wrong, but if someone caught the mistake, you would correct it, and that would make a huge difference.
- As she acknowledged, she took the lecture slides from another professors - but perhaps having a better understanding of those slides would help for answering students' questions.
- n/a
- none
- None. Fantastic Job

5 - How helpful, knowledgeable, and professional was your TA?

Amanda Bienz
